## SOY-JEEPS TO SET SAIL

DaimlerChrysler AG plans to fill each diesel 2005 Jeep Liberty that rolls out of the Toledo Jeep Assembly Plant with 5 percent biodiesel, a fuel produced from Ohio-grown soybeans, the automaker announced yesterday. The Liberty will be the first diesel-powered compact sport-utility vehicle offered in the United States, and production will begin in November. The diesel models will have 2.8-liter four-cylinder engines, which will achieve 22 miles a gallon in the city and 27 miles a gallon on the highway, an about 30 percent improvement from the Liberty's 3.7-liter V-6 gasoline engine.
